Community Emergency Response Team (CERT) Victim Treatment Area Setup

When arranging the victim treatment or staging area, follow these steps:

1. Setup the area with the RED tagged victims closest to the road/entranceway so they are the first victims treated by the Fire Department/Rescue Squad.
2. Next, position the YELLOW tagged victims.
3. Positions the GREEN tagged victims.
4. Position the BLACK tagged victims last. Place them further away and if possible screen the area off so others do not see them.

When arranging the victims for treatment, line them up in a row, alternating Head Up/Feet Up (see picture at left).

This aids the Fire Department or Rescue Squad in performing triage.
